Hiring Team

Base / Coinbase

Dear Base Team,

I've been in and around crypto for years as an investor and curious builder—but something clicked when I read Tina He's recent piece in Every about designing systems with AI agents in mind. That article lit up a path I've been trying to walk: connecting future-forward infrastructure with real human outcomes. It reminded me why I find Base so compelling. You're not just building a faster chain—you're designing an ecosystem for the next billion onchain users.

My onchain résumé is still forming, but I bring over a decade of experience growing ecosystems and aligning strategy, product, and people. At SpiderOak, I helped scale our platform and community across commercial and federal environments. I built programs that onboarded developers, supported adoption, and translated between engineering, product, and customer-facing teams. I've run internal incentive systems, resolved cross-functional blockers, and created systems that help good ideas survive long enough to make an impact.

I've also learned from friends at Electric Coin Company and the Zcash Foundation about how decentralized governance, zero-knowledge infrastructure, and long-term public goods thinking play out in real-world settings. I'd love the opportunity to apply that energy and experience to what you're building at Base.

Let me know if this sounds like a conversation worth having. I'm ready when you are.

Stay Based (a tagline that I love!),

Adam Tervort
